Compostable 環保產品

Compostable Material Product Introduction

生物可分解 ≠ 可堆肥化
biodegradable ≠ compostable

biodegradable

生物可分解(biodegradable)表示產品在自然環境中(土壤、河川、海洋等)·由自然界存在的微生物作用引起降解·可分解為二氧化碳、水和生物質。最重要的是·若垃圾掩埋場缺乏微生物和廢棄物所需的氧氣、濕度以利及時生物降解·這產品並不是屬於可回收或可堆肥的。

Biodegradable means that the product is in the natural environment (soil, river, ocean, etc.), which is degraded by the action of microorganisms in nature and can be decomposed into carbon dioxide, water and biomass. Most importantly, if the landfill lacks the oxygen and humidity required for microbes and waste to facilitate biodegradation in time, this product is not considered to be recyclable or compostable.

compostable

可堆肥化(compostable)一定是生物可分解的·但它的條件更嚴苛·須通過國際測試標準如歐盟的EN 13432、美國的ASTM D6400·滿足180天內達到90%的分解率·84天達到90%的崩解度·且堆肥不具毒性、不含重金屬·才可稱為可堆肥化。

Compostable products must be biodegradable, but they are more stringent and must pass the international test standards such as EN 13432 in the European Union and ASTM D6400 in the United States. They must meet 90% decomposition rate within 180 days and 90% disintegration in 84 days, and composting does not contain toxicity, no heavy metals, can be called compostable.
